EnRoot

Interactive Campus Exploration

Pradeep PJ Kushagra Sinha

Prakash Shukla

Krishna Gautham

B Des - 3rd Year DD 301 - Introduction to Interaction Design

enroot (v.)

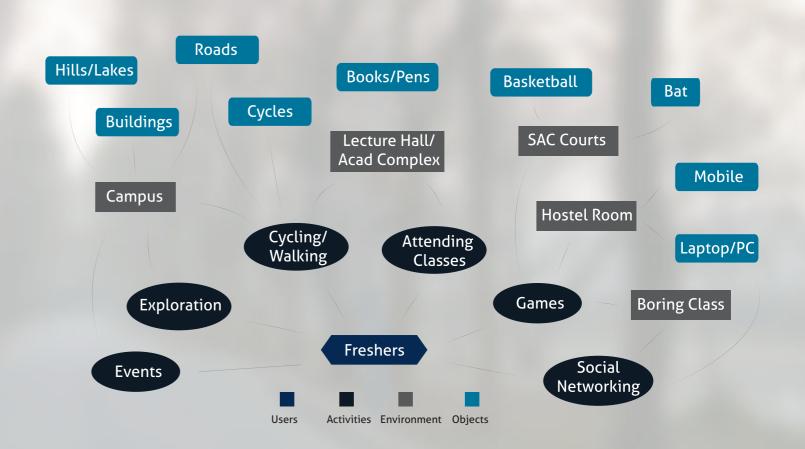

establish by fixing roots firmly; to attach or place securely;

AEIOU Technique

Mapping Activities, Environments, Objects and Interaction of Users

Creating User Focus

Understanding people and environments to which the user is connected directly, is affected and influenced

Ethnographic Study

Understanding users, their experiences and 'explorations'
Understanding users needs, their goals and expectations

Study Phase

Moodboard

Visualising several possibilities and attributes through a moodboard

Modes of Exploration

Categorised based on intent of exploration

Active Exploration

When the motive is only exploration, irrespective of the location **Ex:** Finding new places, exploring campus

Passive Exploration

When the motive is exploration, but the location is fixed **Ex:** Visiting Serpentine Lake, View Point, Brahmaputra Banks

Forced Exploration

When the motive is not exploration, but location is fixed **Ex:** Attending Classes, Events

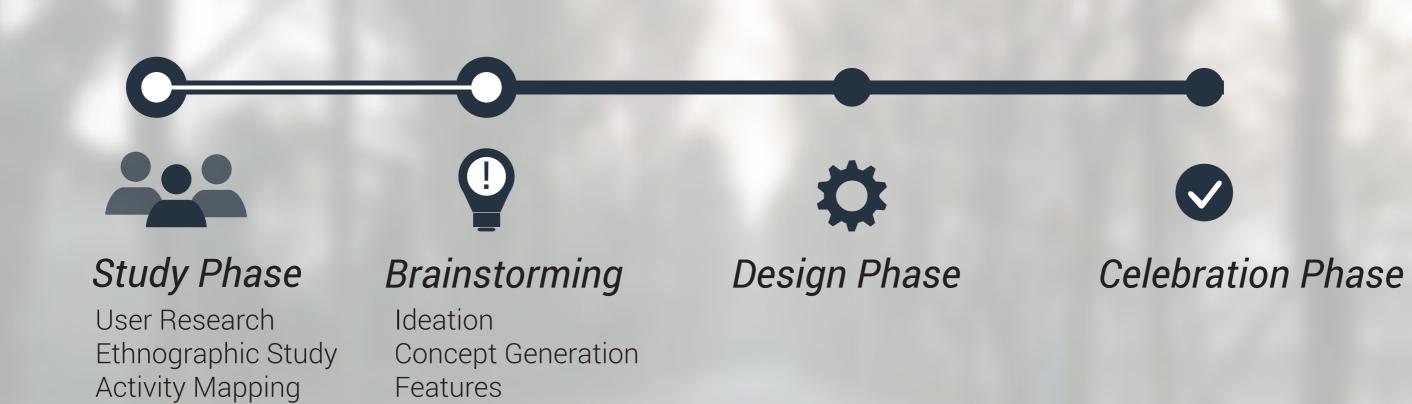

Problem Identification

Analysing information from the earlier studies, we defined the goal that we needed to achieve

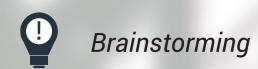

To create an interactive platform to motivate users to come out of their rooms, explore the campus and interact with the environment in an intuitive way

Inclusions / Exclusions

Problem Identification

Motivational Factors

What will motivate our users to 'come out of their rooms'?

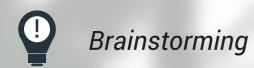

Curiosity of Location

Curiosity of Information

Different from Existing Platforms

Refreshing, Lively, Dynamic, Different

Motivational Factors

What will motivate our users to 'come out of their rooms'?

Enhancing Interaction and Relation with the Environment

Relating Communication through past memories

Relating the Real and Virtual World

Motivational Factors

What will motivate our users to 'come out of their rooms'?

Public Messaging - Location Specific

Storing/Archiving posts

Relating technical terms to nature

Fun Intended Messages

Concept Design

Defining the interaction method and features

'Plant' Messages in real locations

Relating interactions to the environment Relating technical terms to nature

View plants in the real environment using augmented reality

Different from Existing Platforms Relating the Real and Virtual World

Concept Design

Defining the interaction method and features

Message intended to someone can be read only when he goes to the particular location

Motivating Users to come out of their rooms - Curiosity

Notifications show where the message has been planted along with distance from current location

Curiosity of Information Curiosity of Location

Concept Design

Defining the interaction method and features

Trending Topics / Hotspots - Public Messages

Motivating Users to come out of their rooms - Curiosity Location Specific Interactions/Communication

Live Map to show high density of 'plantings'

Curiosity of Information Curiosity of Location Relating Real and Virtual World

Mission and Purpose

- 1) To encourage people to come out of their rooms
- 2) To make people interact with the natural campus environment
- 3) To promote fitness and social interactions
- 4) To change the trend of virtual communication, by relating it to the real world

How do we achieve it?

Intended audiences:

Smartphone Users People living on campus

Requirement Analysis:

Communication platform Mobile App

Live Feed

Messages appear in the real environment Interact with the environment as you communicate and socialise.

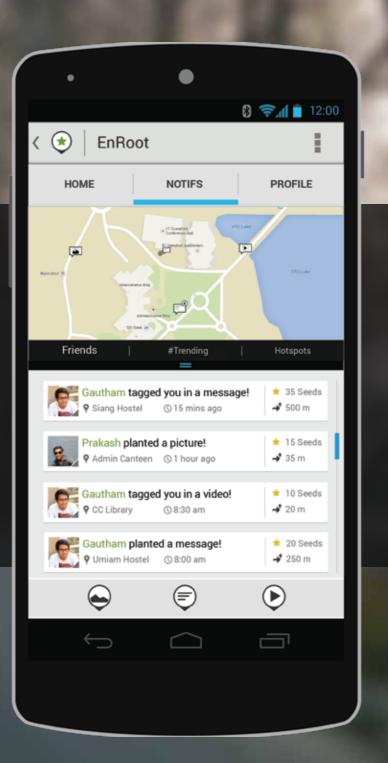

Live Feed

Plant location specific memories photos and videos - as you explore Relive memories where they were created

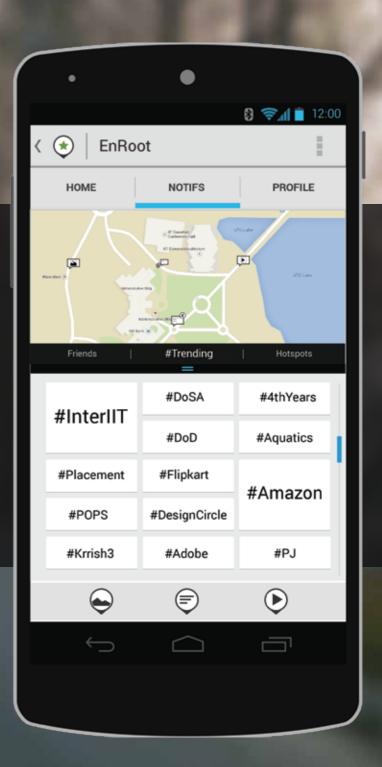

Notifications - Friends

View who planted a message for you, distance from your current location and corresponding social quotient Scroll between live map and notifications

Notifications - Trending

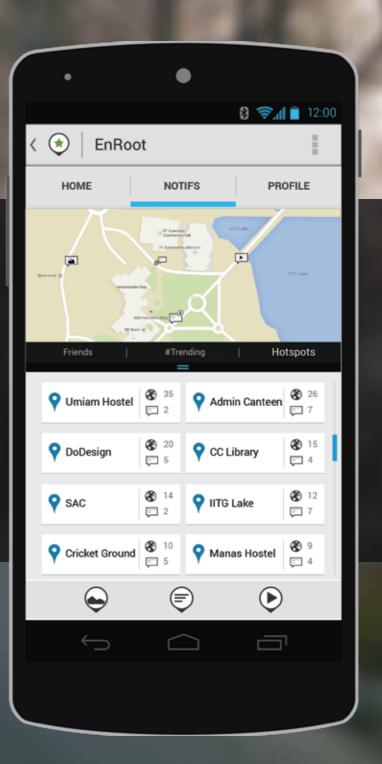

See what's trending in places around you Selecting a topic will show where it is trending in the live map

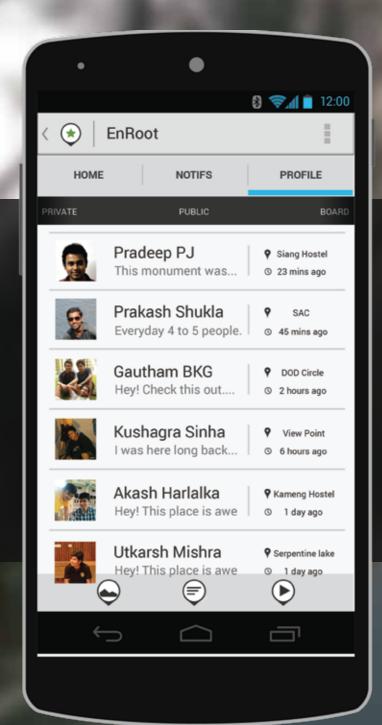

Notifications - Hotspots

See which location around you has high density planting!

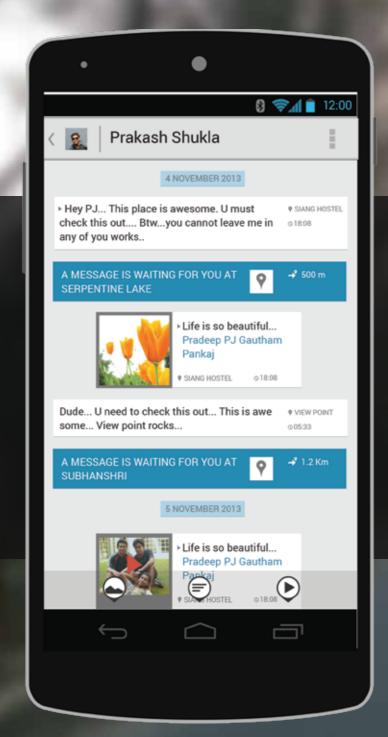

View location based information for number of public and private messages

Profile - Plants

View Saved Plants - Public and Private and access them from anywhere Shift between Private, Public Plants and Social Quotient Leaderboards

Profile - Friends/Plants

View past messages and multimedia

Unread messages are highlighted with a mention of distance from current location

New Plant Screen

Intuitive screen with a live background for planting new messages at current location

Add/tag persons and topics
